All files larger than 1 megabyte will be formatted for a new window for performance reasons and to prevent your browser from responding. © FreeFormatter.com - FREEFORMATTER is a d/b/a of 10174785 Canada Inc. - Copyright Notice - Privacy Statement - Terms of Use Use this tool to convert JSON into XML format. New- Now supports JSONLines. Enter the JSON or JSONLines data below and press the Converter button. The output will be displayed below the Converter button. Note- Spaces in the keys will be converted to underscores See also XML for JSON This online tool allows you to convert an XML file into a JSON file. This process is not 100% accurate in that XML uses different types of items that do not have an equivalent JSON representation. The following rules will be applied during the conversion process: Attributes will be treated as regular JSON properties Attributes can be prefixed with a string to differentiate them from the regular XML elements Sequences of two or more similar elements will be converted to a JSON array The Namespaces are completely omitted from the resulting property names You can add an attribute with _type name to the element to infer the json type (boolean, float, integer, number, string) The types of items #text terminal will be converted to a JSON property with the name #text. This can be changed in the options. *The maximum size limit for uploading files is 2 megabytes. All files larger than 1 megabyte will be formatted for a new window for performance reasons and to prevent your browser from responding.
